EDUCATION

BSc in Honours Computer Science
University of Waterloo

September 2024 - Present
Waterloo, ON

EXPERIENCE

Software Engineer Intern
Shopify

May 2026 - August 2026
Toronto, ON

- Engineered an **end-to-end event subscription pipeline** from trigger creation to workflow activation; built dynamic return-field mapping and an **HMAC-verified Kafka consumer** (mTLS) for live execution.
- Architected a **BigQuery-backed infinite-loop detection engine** using Sidekiq to fingerprint workflow runs, mitigating a runaway loop class that accounted for **~6.7% of all system runs**.
- Root-caused a **silent load-shedding inversion** in the Ruby/Go execution engine that amplified load during incidents; shipped fixes across **3 architectural layers** and built telemetry to expose masked metrics.
- Discovered and resolved two **silent data-loss bugs** in a schema field-usage pipeline spanning **280M rows**; built a dry-run validation mode to ensure zero regressions during production data backfilling.

AI Consulting Intern
EY (Ernst & Young)

February 2026 - April 2026
Toronto, ON

- Architected a **4-agent LangGraph generation engine** with Orchestrator loops and evaluation gates, synthesizing test stubs with complex inter-column dependencies and anomaly injections for M&A data.
- Built a unified micro-frontend on Azure Web Apps wrapping separate agent UIs into a single interface, routing requests via a **BFF layer**, Azure APIM gateway, and Microsoft Entra ID SSO.
- Implemented an observability platform using SQL models and Power BI to ingest BFF execution telemetry, rendering **per-user token costs** to drive gamified tool usage across internal teams.

Software Engineer Intern
Wipro Limited

May 2025 - August 2025
Reading, UK

- Cut onboarding duration from 7 to 4 days** by deploying an automated AI assistant on AWS EC2 using Python and Docker containerization for 1,000+ new hires.
- Reduced ticket resolution time by 40%** by building a RAG search engine across 500+ maintenance manuals.
- Reduced support volume by 60%** by engineering an LLM HR chatbot integrated with vector databases and Java enterprise backends for fast semantic search.

PROJECTS

OffsetAI - Multi-Agent Financial Platform 🔗 | *Next.js, FastAPI, LangGraph, Pinecone, Python*

- Built an autonomous investment assistant synthesizing market feeds and portfolios into actionable trading signals.
- Designed a **self-correcting multi-agent network** validating real-time market trends against live betting odds.
- Engineered a privacy-first RAG pipeline using Pinecone and **Model Context Protocol (MCP)** to securely analyze local user data.

BuildBane - Peer-to-Peer Project Marketplace 🔗 | *Next.js, GraphQL, PostgreSQL, TypeScript, Redis*

- Architected BuildBane (P2P task SaaS scaled to **1,000+ users**) using Next.js 15 and Apollo Server 5 across **20 GraphQL domains** with a 25-model PostgreSQL DB.
- Engineered a low-latency, real-time engine using **concurrent Redis websocket subscriptions** and Firestore, unified under Clerk JWT authentication.
- Designed a feature-sliced frontend with GraphQL Codegen, **Redis sliding-window rate limiting**, and strict TypeScript CI checks.

RELEVANT SKILLS

Languages & Frameworks: Python, C++, C, TypeScript, JavaScript, SQL, React, Next.js, GraphQL, FastAPI, LangGraph

Cloud & Infrastructure: AWS EC2, GCP, Docker, Azure, Redis, Kafka

Databases: PostgreSQL, MS SQL Server, Pinecone, MySQL, BigQuery

EXTRA CURRICULARS AND ACHIEVEMENTS

- Hack the North - Volunteer Organiser.
- Delta Hacks 12 - Winner.
